UniJev: Method and Experimental Findings

Method Overview · Training Pipeline

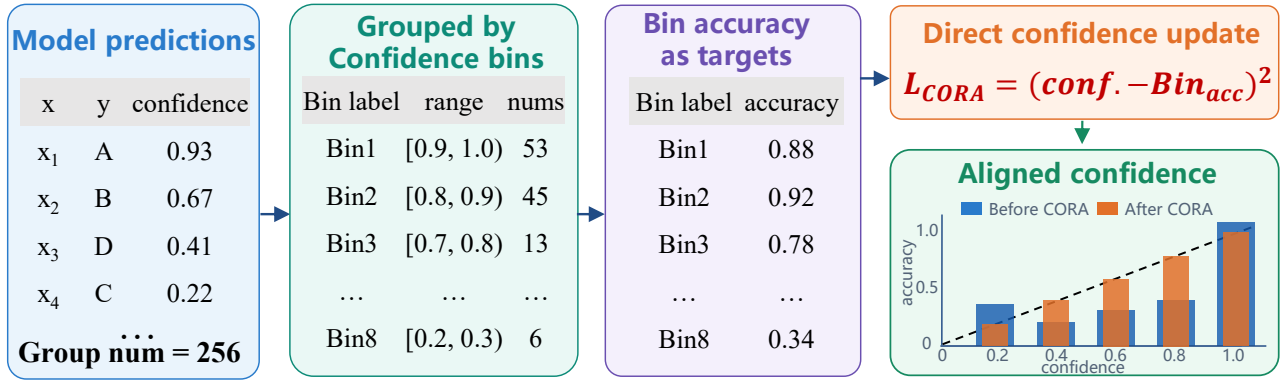

a. Trimodal inputs → shared decision model

b. Stage 1 — SFT for capability

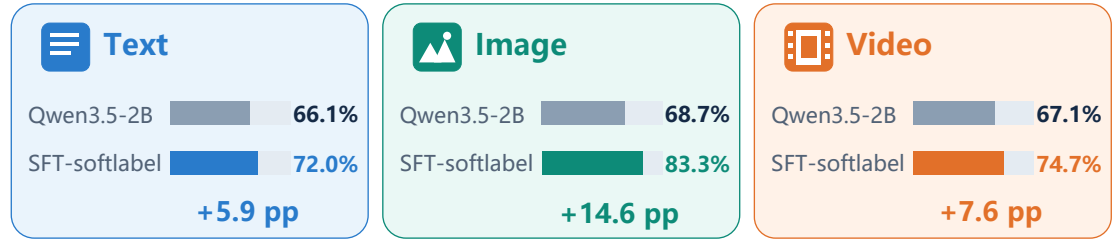

c. Stage 2 — CORA for calibration (supervised confidence alignment)

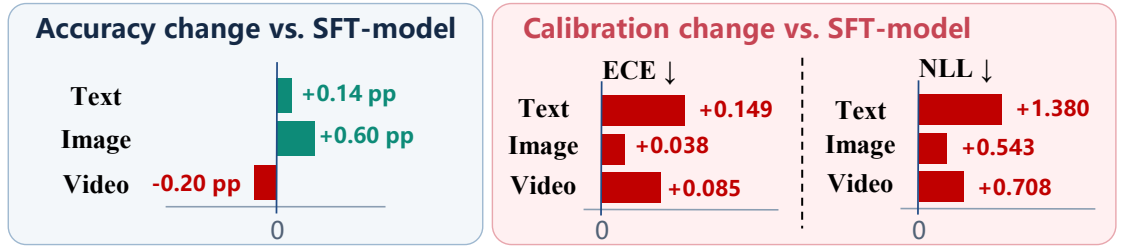

Experimental Summary

RQ1: Capability gained through SFT (2B model as example)

Joint SFT improves accuracy across text, images and video.

RQ2: existing RLCD algorithms: limited gains, unreliable calibration

Reward-driven updates do not reliably produce calibrated confidence.

RQ3: CORA calibration results

Text

	Accuracy ↑	ECE ↓
SFT	72.0%	0.057
CORA	71.9%	0.055

ECE unchanged

Image

	Accuracy ↑	ECE ↓
SFT	83.3%	0.060
CORA	83.6%	0.030

ECE improves

Video

	Accuracy ↑	ECE ↓
SFT	74.7%	0.077
CORA	74.5%	0.052

ECE improves

Main conclusion: capability comes from SFT; calibration needs a direct objective.
